SUMMARY

Full-stack engineer shipping React, Next.js, Node.js, and PostgreSQL features on a high-traffic enterprise platform (Cosmote.gr) used by millions of users annually.

Drives modernization across large legacy codebases, with measurable impact in accessibility (WCAG), rebranding, and A/B-tested product flows.

Designs and ships production applications end to end, from custom Node/Express APIs and PostgreSQL data models to installable PWAs, in complex, cross-functional environments.

SKILLS

Languages: TypeScript, JavaScript, SQL, HTML, CSS

Frontend: React, Next.js, React Native (Expo), Electron, responsive design, web accessibility (WCAG)

Backend & APIs: Node.js, Express, REST APIs, JWT authentication

Data: PostgreSQL, Prisma, Supabase

Practices: Performance optimization, A/B testing, responsive and mobile-first design, cross-functional delivery

Tools & Platforms: Git, Vercel, Railway, Vite, Figma

EXPERIENCE

COSMOTE TELEKOM (OTE Group of Companies)

Marousi, Athens

Full-Stack Engineer

Apr 2025 – Present

- Contribute to 2 product teams on Cosmote.gr, a high-traffic platform serving millions of users annually, with work spanning full-stack delivery, legacy modernization, and reusable platform components.
- Drove migration of 600+ pages during the COSMOTE to COSMOTE TELEKOM rebrand, aligning legacy pages to a new design system with updated visual identity and responsive standards.
- Owned platform-wide React components, including the site header and minicart rendered on every user journey, plus 6+ reusable CMS templates used across all product pages; built the header on a CMS-driven architecture so other teams manage its content independently.
- Run A/B tests across 4 checkout flows and 2 SPAs to optimize user flows and conversion.
- Took the platform from no accessibility support to WCAG compliance, reaching 90%+ Lighthouse accessibility scores on all pages and near 100% on core pages, verified by an external third-party audit.

Frontend Engineer Intern

Oct 2024 – Apr 2025

- Started the 600+ page rebrand migration as an intern and carried ownership into the full-time role, sustaining continuity across the same large-scale platform effort.
- Built 6+ reusable CMS templates for production use across product pages, shipping within a large legacy codebase from day one.
- Improved product-page SEO by over 30% through page updates and removal of outdated pages that were hijacking search results.

PROJECTS

LystMate: Collaborative lists app and PWA backed by a custom Express 5 / Prisma / PostgreSQL API, with JWT plus httpOnly refresh-token authentication, role-based access control, and an email invite system that works

before the recipient has an account.

Tech: Next.js 16, TypeScript, Express 5, Prisma, PostgreSQL | Live: www.lystmate.app | Code: github.com/KarampelasDS/LystMate

Dishmeister: Full-stack social recipe platform with an algorithmic "For You" feed (Supabase RPC), real-time notifications powered by Postgres triggers, an image upload/compression pipeline, and an installable PWA. Designed, built, and deployed solo.

Tech: React 19, TypeScript, Supabase, Vercel Edge | Live: www.dishmeister.com | Code: github.com/KarampelasDS/Dishmeister

TuneSaver: Electron desktop app that matches Spotify playlists to Beat Saber custom maps using a custom weighted similarity engine, with secretless PKCE OAuth, concurrent downloads, and native playlist file generation.

Tech: Electron, React 19, TypeScript, Vite, Spotify API | Live: tunesaver.vercel.app | Code: github.com/KarampelasDS/tunesaver

WalletLogger: Offline-first, multi-currency expense manager for Android. All data lives locally in SQLite with atomic main-currency migration and a hand-built statistics/charting engine (no charting libraries). Published as a standalone APK.

Tech: React Native, Expo SDK 54, Expo Router, Zustand, SQLite | Code: github.com/KarampelasDS/WalletLogger
