SUMMARY

Full-stack engineer with experience shipping React, Next.js, Node.js, and PostgreSQL features on a high-traffic enterprise platform (telekom.gr) used by millions of users annually.

Drove modernization across large legacy codebases: delivered two full-site rebrands in close succession, introduced React via an islands architecture, achieved audited WCAG compliance, and shipped A/B-tested product flows.

Designs and ships production applications end to end, from custom Node/Express APIs and PostgreSQL data models to installable PWAs, in complex, cross-functional environments.

SKILLS

Languages: Python, TypeScript, JavaScript, SQL, HTML, CSS

Frontend: React, Next.js, React Native (Expo), Electron, responsive design, web accessibility (WCAG)

Backend & APIs: Django, FastAPI, Node.js, Express, REST APIs, JWT authentication

Data: PostgreSQL, Prisma, Supabase

Practices: Performance optimization, A/B testing, responsive and mobile-first design, cross-functional delivery

Tools & Platforms: Git, Vercel, Railway, Vite, Figma

EXPERIENCE

TELEKOM (formerly COSMOTE, OTE Group)

Marousi, Athens

Full-Stack Engineer

Jan 2024 – Sep 2026

- Worked across both the frontend and backend teams on telekom.gr (formerly cosmote.gr), a high-traffic platform serving millions of users annually, contributing to 2 product teams with work spanning full-stack delivery, legacy modernization, and reusable platform components.
- Delivered two complete site rebrands in close succession (COSMOTE to COSMOTE TELEKOM, then COSMOTE TELEKOM to TELEKOM), personally owning migration of 1,200+ pages across English and Greek each time to a new design system, including updated responsive standards and architectural code changes.
- Partnered with the design and legal teams across both rebrands to finalize the design system, visual identities, and new names for close to 600 products.
- Introduced React to the legacy platform via an islands architecture during the second rebrand, its first React footprint and now the foundation for its interactive components.
- Built and owned the header, footer and minicart (including combo and couponing logic) rendered on every user journey; built the header on a CMS-driven architecture so non-technical teams manage its content independently.
- Shipped both rebrands on their fixed launch dates with near-zero downtime, cutting over at midnight to minimize user impact.
- Ran A/B tests across 4 checkout flows and 2 SPAs to inform product and conversion decisions.
- Took the platform from no accessibility support to WCAG compliance, reaching 90%+ Lighthouse accessibility scores on all pages and near 100% on core pages, verified by an external third-party audit.

Frontend Engineer Intern

Jun 2023 – Dec 2023

- Joined the frontend team on cosmote.gr, one of Greece's highest-traffic platforms serving millions of users, contributing production work within a large legacy codebase from day one.

- Built 6+ reusable CMS HTML templates used across all product pages spanning multiple categories, shipping straight to live production.
- Contributed to SEO optimization across product pages, improving discoverability and search ranking by over 30% by updating existing pages and removing outdated pages that were hijacking search results.

PROJECTS

LystMate: Collaborative lists app and PWA backed by a custom Express 5 / Prisma / PostgreSQL API, with JWT plus httpOnly refresh-token authentication, role-based access control, and an email invite system that works before the recipient has an account.

Tech: Next.js 16, TypeScript, Express 5, Prisma, PostgreSQL | Live: www.lystmate.app | Code: github.com/KarampelasDS/LystMate

Dishmeister: Full-stack social recipe platform with an algorithmic "For You" feed (Supabase RPC), real-time notifications powered by Postgres triggers, an image upload/compression pipeline, and an installable PWA. Designed, built, and deployed solo.

Tech: React 19, TypeScript, Supabase, Vercel Edge | Live: www.dishmeister.com | Code: github.com/KarampelasDS/Dishmeister

TuneSaver: Electron desktop app that matches Spotify playlists to Beat Saber custom maps using a custom weighted similarity engine, with secretless PKCE OAuth, concurrent downloads, and native playlist file generation.

Tech: Electron, React 19, TypeScript, Vite, Spotify API | Live: tunesaver.vercel.app | Code: github.com/KarampelasDS/tunesaver

WalletLogger: Offline-first, multi-currency expense manager for Android. All data lives locally in SQLite with atomic main-currency migration and a hand-built statistics/charting engine (no charting libraries). Published as a standalone APK.

Tech: React Native, Expo SDK 54, Expo Router, Zustand, SQLite | Code: github.com/KarampelasDS/WalletLogger
